

ALUMINIUM | TIMBER

Premium Gates, Fences & Access Solutions

ABOUT US

Heritage Gates & Fences have been supplying New Zealand with premium gates and fencing solutions for over two decades. Our high-quality gates are hand-crafted in New Zealand from aluminium and timber, backed by our years of experience and our quality guarantee.

We still produce the range of traditional timber gates that the Heritage brand is renowned for, but aluminium is now becoming the material of choice for gates in both traditional styles and modern designs.

High quality, custom-design gates and fences will add value to any property. Whether you require privacy and security, or simply wish to add street appeal, our client-focused team will work with you to meet the requirements of your project.

ALUMINIUM | TIMBER | CUSTOM DESIGN | AUTOMATION

ALUMINIUM FEATURES

- **Strong & Durable** - yet light in weight, Aluminium will not warp or split in the weather.
- **Versatile** - Aluminium can be fabricated into many different designs, from modern designs to styles that replicate traditional timber gates.
- **Low Maintenance** - Aluminium gates require much less maintenance than timber gates.
- **Corrosion Resistant** - Aluminium will not rust.
- **Powder-Coated Finish** - Processed through a certified plant, the pre-treatment and coating system are guaranteed to give you a premium protective finish.
- **Made to Measure** - Gates and fences can be constructed to suit any property. Designs can be adapted for single or double swing gates, sliding gates, or sliding cantilever gates.
- **5 Year Guarantee** – Manufactured to the highest standard, aluminium gates are guaranteed for 5 years (conditions apply).

TIMBER FEATURES

- **Traditional Methods** - We use very strong mortise and tenon joints.
- **Solid Construction** - Our gates are constructed with methods refined over many years.
- **Durable** - Waterproof adhesives and multi-coat paint finishes ensure our gates can perform well when exposed to the elements.
- **Selected Timber** - Kiln dried No 1 clears (knot free) Radiata Pine, H3.2 Treated (also available in Cedar).
- **Made to Measure** - Designs can be adapted for many different situations.
- **2 Year Guarantee** - Manufactured to the highest standards, timber gates are guaranteed for 2 years (conditions apply).

NOTE:

Timber is a natural product with a varying lifespan, depending on the environment of the product. Like any natural product, it will not last if it is exposed to the elements without adequate protection. Regular upkeep is required to ensure the warranty is valid. Refer to our website for care and maintenance guidelines. For dark colours whether painted or stained, we strongly advise aluminium.

THE ALUMINIUM SELECTION

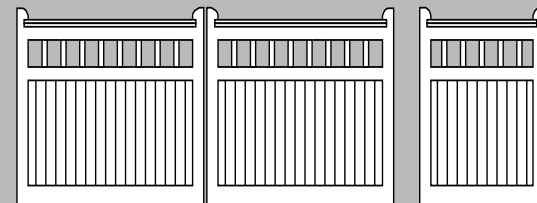

ALUMINIUM GATES & FENCES

Heritage is now replicating traditional timber designs in powdercoated aluminium. We've developed manufacturing processes and designs over several years to offer a traditional-looking gate without the high maintenance requirements of timber gates.

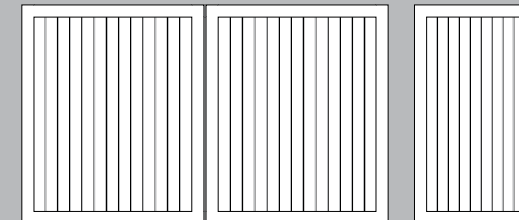

Aluminium gates are much lighter than timber, making them easier to operate and better for automated gates. Most importantly aluminium will not warp or split in the weather, the way timber gates can. It is especially suitable for dark-coloured gates.

We have a wide range of traditional and modern designs and a huge range of colour choices, to suit any projects.

ELITEWALL® SYSTEMS

EliteWall is the ultimate choice for property owners who require a cost-effective solid panel fence that provides style, function, privacy and even noise reduction. With multiple design options available the superior acoustic properties of the EliteWall makes it a popular option for both residential and commercial applications. EliteWall is the ideal alternative to concrete or block walls at a lower cost and with faster construction.

AUTOMATION & ACCESS CONTROLS

SWING GATE

Articulating Arm swing gate openers are designed for swing gates installed on large pillars.

Electro mechanical swing gate openers are designed in various versions for easy and functional use for residential or commercial applications.

SLIDING GATE

Sliding gate openers are available in many configurations, from light weight residential applications through to heavy duty industrial applications.

POWDER-COATING PROCESS

The powder-coating process starts with the metal components being cleaned, which helps the coating to adhere to the metal. The process is carried out in multi-stages;

- A de-greaser and etch is used to clean the metal, followed by a thorough rinse down.
- Next a chromate bonder is applied to help the powder adhere to the aluminium.
- A drying oven is used to ensure no moisture is present when the items are powder-coated.
- The components are then passed through a spray booth where the powder is applied by electro-static spray guns.
- Once the powder has been applied it then goes through a curing oven where the particles melt and fuse together and adhere to the metal surface.

This produces a uniform, smooth and durable finish.

THE TIMBER SELECTION

TIMBER GATES & FENCES

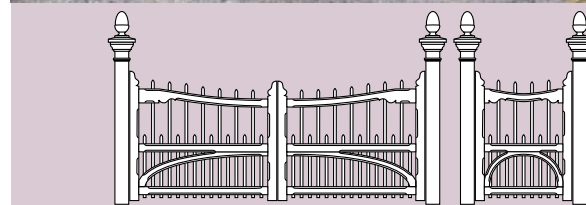

Timber has been used to manufacture gates for hundreds of years. Over the last 20 years, Heritage have perfected the methods and designs of timber gates; we know what works.

We use carefully-selected timber and strong mortise-and-tenon joints to ensure long-term strength and durability. We offer a multi-coat paint system to protect the gates as much as possible from the elements.

Timber is a natural product and therefore timber gates are susceptible to some movement and splitting with the effects of the weather. Our team will help you select the best option for your project.

 Our Timber Gates have corresponding designs available in powder-coated Aluminium.

GUARANTEE OF QUALITY

Heritage Gates and Fences guarantee that all our products are manufactured from quality materials and with quality workmanship. We stand by our reputation for quality.

We provide a five-year warranty on powder-coated aluminium gates and fences. We provide a two-year warranty on timber gates and fences; provided protective coatings with a minimum light reflectance value of 60% are applied prior to the product being exposed to the weather. Any warranty expressly excludes defects that have arisen as a result of vandalism, fair wear and tear, and climatic conditions. Particularly, timber gates are made from a natural product and some movement of the timber and formation of surface splits will occur with exposure to the weather; these features are not covered by any warranty.

We provide a two-year warranty on automation and access equipment.

This guarantee is dependent on the product being maintained in accordance with our maintenance guidelines and does not cover damage done to the gate by inadequate or inappropriate hardware or installation.

Conditions apply to the above summary; full details of our warranties are available on request.

DISCLAIMER

Although every effort has been made to ensure the information in this brochure is accurate, no responsibility is accepted for any errors or omissions in this brochure, nor for any specifications or work based on this information.

Pictures of some designs may be representative only and some may show custom features not included in the standard specification. We reserve the right to change designs or specifications without notice.

Please contact us with your requirements and we will assist with any design clarification.
